

What is EDI?

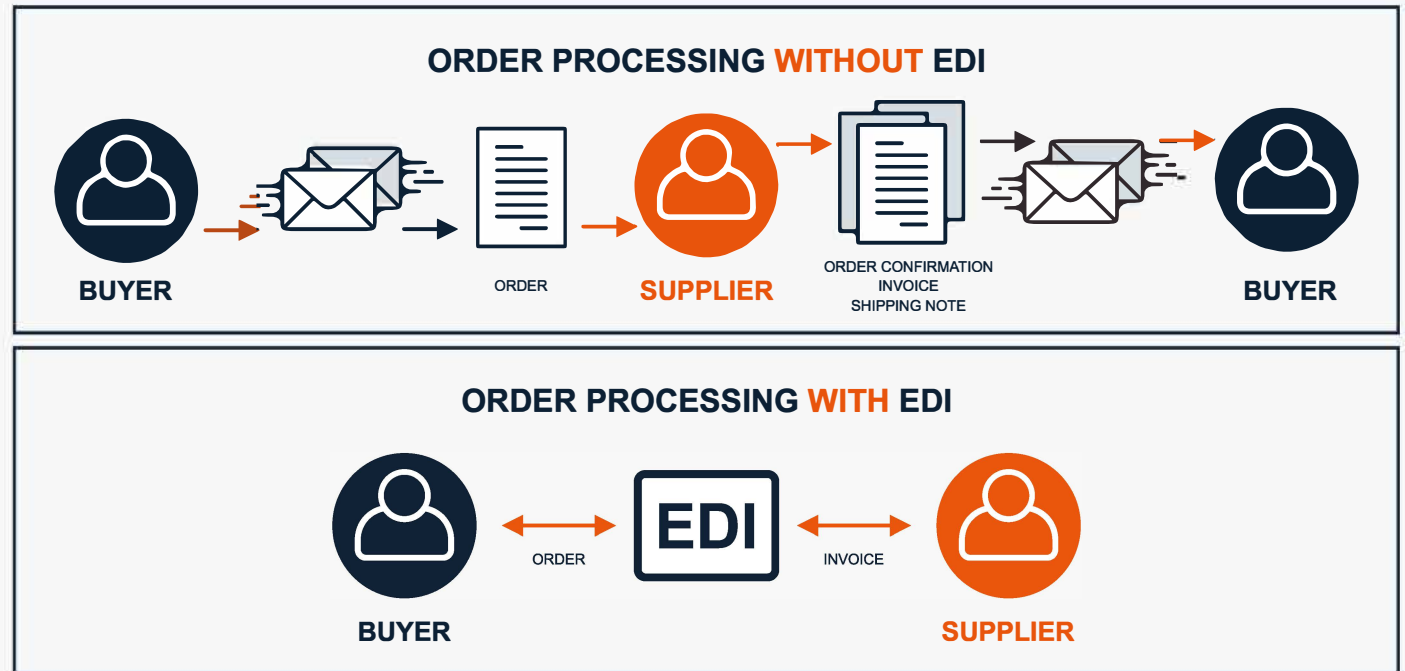

EDI stands for Electronic Data Interchange and that means virtual exchange of data between trading partners.

This is automated exchange of business documents such as purchase orders, order confirmations, shipping notes, invoices or warehouse inventory reports. How does EDI work?

How do I get started with EDI?

- Decide what data processing needs to be automated.
- Designate an IT resource for project implementation.
- Choose the most appropriate automation method - data exchange platform.
- Harmonize data structure and test data exchange mechanism.
- Make the necessary adjustments and / or run the system.
